Air Circuit Breaker

NXA series air circuit breaker	P-001
Overview	P-003
Product selection	P-005
Functions and features	
Technical parameters	P-009
Intelligent controller	P-011
Protection feature	P-015
Measurement precision of the intelligent controller	P-017
Accessories	P-019
Capacity derating and power loss	P-023
Dimension of busbar	P-026
Selective protection between NM8 and NXA	P-027
Installation and wiring	
Dimensions and installation	P-029
Secondary circuit wiring	P-051
Annex	
I Configuration	P-056
II Selection table	P-057
III Earth fault protection	P-058
IV Source-changeover controller	P-061

Structural features of the circuit breaker

Circuit breaker description

Ν

Circuit breaker

- Frame size (A): 1600, 2000, 3200, 4000, 6300
- Breaking capacity: N,S,H
- Rated operational voltage Ue (VAC): 380/400/415, 440/525/690
- Number of poles: 3P, 4P
- Installation method: draw-out type, fixed type

Operation conditions and environment adaptability

- Operation temperature:
 - The electrical and mechanical characteristics are applicable to the ambient temperature of $-5^{\circ}C -+40^{\circ}C$. NXA can also operate in the ambient temperature of $-45^{\circ}C -+70^{\circ}C$ (M type, A type), $-20^{\circ}C -+70^{\circ}C$ (P type, H type, CD-1), the derating factor is seen in P23-24.
- Storage conditions: apply to -45°C ~+70°C
- NXA can resist the following electromagnetic interference
- Overvoltage generated by electromagnetic interference
- Overvoltage caused by environment interference or a power distributing system
- Electrostatic discharge of radio waves (radio, intercom, radar and the like)
- NXA has successfully passed the test for electromagnetic compatibility specified according to the following standards (EMC) IEC/EN 60947-2 Annex F
- The test can guarantee no false tripping and no interference on tripping time
- Protection grade:
 - Front IP 20, other side IP 00

Connection

- Rear connection
- Horizontal connection, vertical connection
- Optional accessories Interphase barrier

Lock

- Padlocks of "Making" and "Breaking" push button
- Position padlock (for locking the circuit breaker at disconnected position)
- Chassis padlock
- Door interlock: the circuit breaker is arranged at the connected or test part so as to prohibit to open the door

Indication contact

- Standard contact Making and breaking indication contacts
- Fault tripping indication contact
- Optional accessories
 Position indication contact
 - Spring charged indication contact

Drawowt type breaker

Fixed type breaker

NXA16

NXA20~NXA40

Note:NXA63 fixed type is seen in P45

Accessories

Interphased partition

N pole CT

Secondary wiring terminal-drawout type

Counter

Secondary wiring terminal-fixed type

PSU-1

Model definition and description

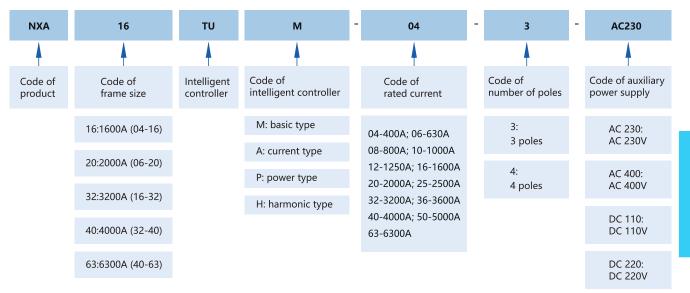

NXA	16	N	04	- М		D	3	AC230	М	Other
	4	4	4	4		4	4	-	4	
Code of Product	Code of frame size	Code of breaking capacity	Code of rated current	Code of intelligent controller		Code of installation method	Code of number of poles	Code of control circuit voltage	Code of operation mode	Code of special requirement
	16:1600A (04-16)	N: basic type	04-400A 06-630A	M: basic type A: current type		D: draw-out type	3: 3 poles	AC 230: AC 230V	No code: motor operation	No code: no special requirement
	20:2000A (06-20)	S: standard type	08-800A 10-1000A 12-1250A	P: power type H: harmonic	× OA N A B C	F: fixed type	4: 4 poles	AC 400: AC 400V	M: manual operation	Special requirements code,
	32:3200A (16-32)	H: advanced type	16-1600A 20-2000A 25-2500A	type	type			DC 110: DC 110V		such as: UVT
	40:4000A (32-40)		32-3200A 36-3600A 40-4000A					DC 220: DC 220V		
	63:6300A (40-63)		50-5000A 63-6300A							

Note: 1) Intelligent controller PT/HT type. The basic functions are the same with P/H type. T refers to the internal temperature measurement function.

2) Manual operation does not contain motor-driven mechanism, closing electromagnet and shunt release. Motor operation contains all standard accessories of remote operation.

3) Auxiliary working voltage of the intelligent controller: corresponding power modules is required if DC220V or DC110V is selected.

4) NXA16N10-AD3-AC230: frame size is 1600A, N type breaking capacity, rated current is 1000A, A type intelligent controller, draw-out type and 3 poles, control voltage is AC 230V motor operation.

Ν

M/A-type intelligent controller

- 1.Display window : display current value, setting parameter , fault current , trip time , etc.
- 2.Ig indicator : This light is on after ground fault trip
- 3.Ir indicator : This light is on after overload long-delay trip
- 4.Isd indicator : This light is on after shortcircuit short-delay trip
- 5. li indicator : This light is on after shortcircuit instantaneous trip
- 6.Menu button : Query the DIP position and fault record
- 7.Right button : Switch to the next state when querying the DIP position
- 8. Return button: Return to the previous level , or reset
- 9.Overload long-delay current multiple setting switch
- 10.Short-circuit short-delay current multiple setting switch
- 11.Ground fault current multiple setting switch
- 12.Overload long-delay time setting switch 13.Mask keyhole
- 14.Short-circuit short-delay time setting switch
- 15.N-pole protection setting switch
- 16.Ground fault delay time setting switch

17.Test

 Short-circuit instantaneous current multiple setting switch

Intelligent controller

M/A-type intelligent controller(basic protection)

Protection

The setting of all protected thre sholds and DIP switches for delay. The setting value can be displayed in the display window.

- Overload protection
- True RMS long delay protection
- Thermal memory: Accumulation of heat before and after tripping
- Short-circuit protection
- Short delay (RMS) and instantaneous protection
- 4-speed definite time is optional in terms of delay.
- Ground fault protection
- 4-speed definite time is optional in terms of delay.
- Neutral line overcurrent protection
 The neutral line protection threshold can be adjusted to 50%,100% and off for 3P + N or 4P products(6300 shell frame only 50%)
- Test function Simulate 6Ir test current for test tripping
- Trip record function One-time failure memory function
- Ammeter

The M-type intelligent controller measures the true current rms between 40% and 150% with an accuracy of 2%

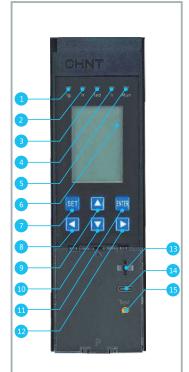

- Operation times record function
- A-type intelligent controller (current type)

Protection

The setting of all protected thresholds and DIP switches for delay . The setting value can be displayed in the display window.

- In addition to the protection and extended functions of all M-type control units , the A-type control unit also includes
- Voltage imbalance protection

The main circuits current phase failure or three phase current imbalance can be protected.

P-type intelligent controller

- 1.lg indicator: This light is on after ground fault trip
- 2.Ir indicator : This light is on after overload long-delay trip
- 3.lsd indicator : This light is on after shortcircuit short-delay trip
- 4.li indicator : This light is on after shortcircuit instantaneous trip
- 5.Running indicator : This light flashes during normal operation
- 6.LED screen : Tri-color backlight , green during normal operation , yellow upon an alarm , and red after tripping
- 7.Setting button
- 8.Left button
- 9.Up button
- 10.Down button
- 11.OK button
- 12.Right button
- 13.Mask keyhole
- 14.USB interface
- 15.Test button:trip test

P type intelligent controller (power type)

Protection

The setting of all protected thresholds and buttons for delay.

- Include the protection functions of all A-type control units
- Ground current protection function (optional) Equipped with a dedicated external transformer and disconnection protector for power grounding protection
- Advanced protection function
- Voltage imbalance protection
- Overvoltage and undervoltage protection
- Over-frequency and under-frequency protection
- Phase sequence protection
- Reverse power protection function
- Required value protection function

The required value of the true RMS of each phase current is calculated in a measurement window , and the protection works when the required value exceeds the limit.

When the execution mode is an alarm , the action is in principle the same as the grounding alarm . The settings for the sliding time window are in the "measurement table settings"menu . The required value protection is set for each item:

Maximum required current value of phase A ; Maximum required current value of phase B; Maximum required current value of phase C; Maximum required current value of phase N;

- (not affected by neutral line protection setting)
- Extended functions

Intelligent controller self-diagnosis

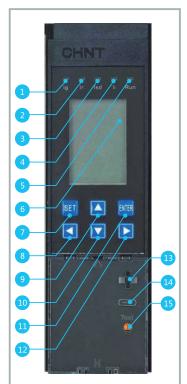

Recording function of the number of operations/fault trip/alarm/ displacement: providing the last 8 records Main contact wear display function : The contact wear degree is evaluated according to the mechanical life,electrical life and breaking capacity of different frames. Internal clock function Button Trip-test function

- Electric energy meter
- Current measurement
- Voltage measurement
- Frequency measurement
- Required value measurement
- Power (active, reactive, apparent) measurement
- Electric energy (active, reactive, apparent) measurement

Power factor measurement

LCD tri-color backlight

Green during normal operation, yellow upon an alarm, and red atter tripping.

H-type intelligent controller

- 1. Ig indicator:This light is on after ground fault trip
- 2.Ir indicator:This light is on after overload long-delay trip
- 3.lsd indicator:This light is on after shortcircuit short-delay trip
- 4.li indicator:This light is on after short circuit instantaneous trip
- 5.Running indicator: This light flashes during normal operation
- 6.LCD screen:Three-color backlight , green during normal operation , yellow during an alarm , and red after tripping
- 7.Setting button
- 8.Left button
- 9.Up button 10.Down button
- 11.OK button
- 12.Right button
- 13.Mask keyhole
- 14.USB interface
- 15.Test button:trip test

H type intelligent controller (harmonic type)

Protection

The setting of all protected thresholds and buttons for delay

- In addition to the protection and extended functions of all P-type control units, the H-type control unit also includes
- Load monitoring function
- Zone selective interlock
- Communication function Modbus-RTU communication protocol
- Input / output function
 2DI2D0 or 4DO
 DI signal : AC (220-250) V
 DO requires a power unit (24VDC output) and a relay unit
- Harmonic analysis function

Measure the fundamental current , fundamental phase voltage , fundamental power and 3-31 odd-order harmonic current content (HRIh) , harmonic voltage content(HRUh) , total harmonic current distortion rate [THDi,thdi] , total harmonic voltage distortion rate [THDu,thdu]. Harmonic content (HR):The ratio of the square root mean of the hth harmonic component contained in the periodic AC amount to the square root mean of the fundamental component (expressed as a percentage).

Protection features

The protection features of the intelligent controller comprise inverse time characteristic and constant time characteristic. When the fault current exceeds the set value of the inverse time limit, the controller performs constant time protection. The inverse time limit corresponds to the feature curve l2t.

Overload long-time-delay protection feature

Overload long-time-delay protection action threshold value <1.05Ir : > 2h, no action \ge 1.3Ir : < 1h, action

Ir current setting value range: 0.4In, 0.5 In, 0.6 In, 0.7 In, 0.8 In, 0.9 In, 1.0 In+OFF (M/A); 0.4In~1.0In+OFF(P/H) Inverse time limit action feature: I2t, wherein t= $(6/N)^{2*}$ tr

Setting Multiple of Current	Action Time							
1.5lr	16	32	64	128	192	256	320	384
2lr	9	18	36	72	108	144	180	216
6lr	1	2	4	8	12	16	20	24

Note: N --- the multiple I/Ir obtained by dividing failure current by set current

t --- time delay action of the failure action

tr --- long-time-delay set value

Allowed error of the action time $\pm 15\%$

Conventional factory tuning:Ir=1.0In

tr=2s@6Ir

Short circuit short-time-delay protection feature

Short circuit short-time-delay protection action threshold value

< 0.85Isd: no action

> 1.15Isd: action

Isd current set value range: 2Ir, 3Ir, 4Ir, 5Ir, 6Ir, 8Ir, 10Ir +OFF (max 50kA, M/A);2Ir~10Ir+OFF(max 50kA, P/H)

Current	Action time		Remark		
lsd < l≤10lr	Lauran Alas - David	Action feature I ² t= (10Ir) ² tsd			
	Inverse time limit	Setting time s 0.1, 0.2, 0.3, 0.4	Р, Н		
		Setting time s 0.1, 0.2, 0.3, 0.4			
l≥1.1Isd	Constant time limit	Minimum s 0.06, 0.16, 0.255, 0.34	M, A, P, H		
		Maximum s 0.14, 0.24, 0.345, 0.46			
	Return time	0.05, 0.14, 0.25, 0.33			

Note: Isd---short-time-delay current set value

I--- failure current value

Ir- long-time-delay set value

t--- failure action time-delay time

tsd---short-time-delay inverse time limit set value

Permissible error of action time $\pm 15\%$

Conventional factory tuning:Isd=8Ir(Ir < 6250A)

Isd=50kA(Ir ≥ 6250A)

tsd=0.4s

Short circuit instantaneous protection features

Short circuit instantaneous protection action threshold value

< 0.85li: no action

> 1.15li: action

The current setting value of instantaneous action: 2In, 4In, 6In, 8In, 10In, 12In, 15In+OFF(NXA40 max50kA, NXA63 max63kA, M/A);

2In~15In+OFF(NXA40 max 50kA, NXA63 max63kA P/H)

Note: action time \leq 50ms

Conventional factory tuning:li=12In(In=400A~5000A)

li=63kA(ln=6300A)

Earth fault protection action features

Earth fault protection action threshold value

< 0.9Ig: no action

> 1.1lg: action

M/A

Current setting value	А	В	С	D	E	F	G	OFF
NXA16, 20	0.2In	0.3ln	0.4In	0.5In	0.6ln	0.8ln	In	
NXA32, 40, 63	500A	640A	800A	960A	1040A	1120A	1200A	
tg(s)	Inverse time limit	Action features						

P/H

NXA16、20: 0.2ln~1.0ln+OFF NXA32、40、63: 500A~1200A+OFF

+-	$\frac{(\lg)^2}{\chi}$			
ι-	2	^ tg		

	Setting time (s)	0.1	0.2	0.3	0.4
Constant time limit	Minimum (s)	0.06	0.16	0.255	0.34
	Maximal (s)	0.14	0.24	0.345	0.46
	Return time	0.05	0.14	0.25	0.33

Note: Ig --- earth fault protection setting value. Default setting:NXA16/20:Ig=0.5In

When In ≥ 1250A, Ig max=1200A NXA32/40/63: Ig=800A

I --- failure current value

t --- failure action time-delay time

tg --- earthing inverse time limit set value

The permissible error of the inverse time limit action time: ±15%

Conventional factory tuning:OFF

Controller minimum display current

Frame	In	Minimum display value (A)
1600	400~1600	60
2000	630 ~ 2000	60
≥3200	≥1600	120

Note: Controller can work normally when single phase not less than 0.4ln, three phase not less than 0.2ln.

Intelligent Controller measurement accuracy

Current measurement

Measuring range	la,lb,lc and In , not less than 15In (breaker rated current)	
	Not accurate below 0.1In	
	Accuracy varying linearly from 5% to 2% between 0.1In and 0.4In	
Measurement accuracy	Accuracy is 2% between 0.4In and 1.5In	
	Accuracy varying linearly from 2% to 15% above 1.5In	
	Accuracy is 10% for ground current	
Voltage measurement		
Measuring range	Linear voltage : 0-600V	
Measuring range	Phase voltage: 0V~300V	
Measurement accuracy	Tolerance : ±1%	
Frequency		
Measuring range	45HZ-65HZ	
Tolerance	Tolerance:±0.1HZ	
	1	
-		
Power		
Measurement method	RMS mode	
	3p-type:total active power , total reactive power , total apparent power	
Measurement content	4p-type : split-phase active power , split-phase reactive power , split-phase apparent power , total activepower , total reactive power , total apparent power	
	Active power : -32768kw~+32767kw	
Measuring range	Reactive power : -32768 kvar~+32767 kvar	
	Apparent power : 0KVA-65535kVA	
	Tolerance:±2.5%	
Power factor		

Power lactor	
Measurement content	Total power factor , split-phase power factor
Measurement range	-1.00~+1.00

Electric energy		
Measurement content	Input reactive energy (EQin),output reactive energy (EQout)	
	Input active energy (EPin) , output active energy (EPout)	
	Total active energy (EPtotal),total reactive energy (EQtotal),total apparent energy (EStotal)	
Measuring range	Active energy:(0~4294967295) kWh	
	Reactive energy:(0~4294967295) kvarh	
	Apparent energy:(0~4294967295) kVAh	
Measurement accuracy	±2.5%	

Harmonic measurement	
Fundamental measurement	Current:la,lb,lc
Fundamental measurement	Fundamental measurement voltage:Uab,Ubc,Uca
Total harmonic distortion	THD : total distortion rate of harmonic relative to fundamental wave
	Thd . total distortion rate of harmonic relative to RMS
Amplitude spectrum of harmonics	The Controller can display the FFT amplitude of 3-31 odd-order harmonics and display as a percentage
Control unit measurement accuracy	±2%

Earth fault protection curves

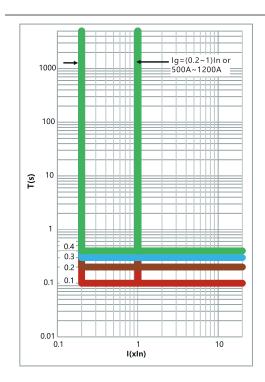

Fig.2 Asymmetrical earth fault protection curves

Accessories: locks Pushbutton lock The pushbutton lock is to lock the circuit breaker by a transperant conver blocks so as to prevent the breaking button and the making button of the circuit breaker from misoperation

and guarantee the reliable running of the circuit breaker.

Body lock

- A key lock includes four types. The latter two are applied to 2 input and 1 connect power distribution system:
- Random lock
- One lock and one key
- Two locks and one key
- Three locks and two keys

Note: When the user separately purchases the key lock for installation, the panel needs to be opened with a hole opener, and the hole opener is provided by the user. Hole diameter: NXA16: Φ 21mm NXA20~63: Φ 24mm

Safety shutters padlock

 The padlock is prepared by users.Diameter of the lock is no more than Φ5mm. when a circuit breaker body is at the disconnected or test part, the safety shutters automatically block access to the disconnecting contact cluster.

"Disconnected" position padlock

After the chassis and body are locked at "Disconnected" position by a padlock, the racking-handle cannot be inserted into racking-handle entry, and then the position of the body cannot be changed.

Door interlock

Circuit breaker state door interlock

- A cabinet door is prohibited to be opened when the circuit breaker is closed.
- The cabinet door is allowed to be opened when the circuit breaker is disconnected. Circuit breaker position door interlock

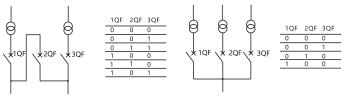

The cabinet door is prohibited to be opened when the circuit breaker is at the connected and test part. The cabinet door is allowed to be opened when the circuit breaker is at the disconnected position.

Cable mechanical interlock

It can realize the interlock of two horizontal or vertical-installed, three poles or four poles, drawout type or fixed type circuit breaker.

Circuit diagram

Note:a. If need bend the cable,make sure radian is more than 120°.

- b. Check and make sure enough lubricating oil of the cable.
- c. The maximum distance between two interlock circuit breakers is1.5m.

0-1

Accessories: indication contacts

ON/OFF indication contacts			
Standard configuration		4CO	6CO(for AC of NXA16 only)
Breaking capacity		Current (A) / Voltage (V)	Current (A) / Voltage (V)
Utilization category	VAC(AC-15)	1.3/240, 0.75/415	1.3/240, 0.75/415
	VDC(DC-13)	0.55/110, 0.27/220	0.55/110, 0.27/220

"Connected", "disconnected" and "test" position indication contact		
Standard configuration		1CO/3
Breaking capacity		Current (A) / Voltage (V)
Utilization category	VAC(AC-15)	1.3/240, 0.75/415
	VDC(DC-13)	0.55/110, 0.27/220

Alarming contact		
Standard configuration		1CO
Breaking capacity		Current (A) / Voltage (V)
Utilization category	VAC(AC-15)	1.3/240, 0.75/415
	VDC(DC-13)	0.55/110, 0.27/220

Spring charging indication contact		
Standard configuration		1NO
Breaking capacity		Current (A)/ Voltage (V)
Utilization category	VAC(AC-15)	1.3/240, 0.75/415
	VDC(DC-13)	0.55/110, 0.27/220

Note: 1) CO refers to a switch contact, and a one-normally-open and one-normally-closed contact is matched with a common terminal.

2) NO refers to a normally open contact. NC refers to a normally closed contact.

- Motor-driven mechanism (MO) (Standard configuration)
- When a circuit breaker is switched on, an motor operation mechanism stores energy automatically, so that when the circuit breaker is tripped, the device can switch on instantly. An energy-storage handle as spare when no auxiliary power supply is provided.

Characteristics		
Power supply	VAC 50/60HZ	220/230/240, 380/400/415
	VDC	110, 220
Operation threshold		0.85-1.1Us
Frame size: power loss (VA or W)		16: 75W; 20: 85W; 32: 110W; 40: 110W; 63: 150W
Motor overcurrent		≤1min
Charging time		≤7s
Operation frequency		≤2times/min

• Shunt Release(SHT)

The Shunt Release (SHT) is used to remotely disconnect the Circuit Breaker. When the Circuit Breaker is in the closed state, it can be opened at any time.

The SHT device has both AC and DC control modes . When the power supply voltage is equal to any voltage value between 70% and 110% of the rated control power supply voltage , the SHT can reliably disconnect the Circuit Breaker .

Characteristics of shunt release					
Rated control power supply voltage Us (v)	AC220/230/240	AC380/400/415	DC220	DC110	AC110
Operating voltage (V)	(0.7-1.1)Us				
Break time (ms)	≤ 28				

TIP:

Power consumption (VA/W)

500

The Shunt Release and Closing Electromagnet belong to the pulse energization working mode , and it is necessary to ensure that the pulse time t1 is not less than 200ms and the energization interval t2 is greater than 15s.

620

500

400

400

Closed electromagnet

After the energy storage of the motor is completed, the closed electromagnet can be operated and controlled within a range of 10 meters to instantaneously release the energy storage spring force of the operating mechanism to close the circuit breaker.

Characteristics of closed electromagnet

Rated control power supply voltage Us (v)	AC220/230/240	AC380/400/415	DC220	DC110	AC110
Operating voltage (V)	(0.85-1.1)Us				
Close time (ms)	≤ 50				
Power consumption (VA/W)	500	620	500	400	400
TIP:					

The Shunt Release and Closing Electromagnet belong to the pulse energization working mode , and it is necessary to ensure that the pulse time t1 is not less than 200ms and the energization interval t2 is greater than 15s

Shunt Release

- Undervoltage release (UVT)
 - Under-voltage release (UVT) (Optional, The power must be turned on before the circuit breaker is closed)

The under-voltage release has instantaneous operation and delayed operation:

Operation types of each frame under-voltage release	Self-priming	Helped priming
Under-voltage instantaneous release	Inm=1600A, 6300A	Inm=2000A, 3200A, 4000A
Under-voltage delay release	Inm=1600A, 6300A	Inm=2000A, 3200A, 4000A

Notes:

1. Inm=1600A under-voltage delay does not require an external delay controller.

The power-off operation is an instantaneous operation. There is no zero

voltage delay function;

2. Inm=6300A under-voltage delay does not require an external under-voltage delay

controller. There is a delay function for low voltage and power off;

3. Inm=2000A~4000A under-voltage delay requires an external delay controller.

There is a delay operation when the power is off. There is a zero voltage delay function.

Delay time of under-voltage release	Delay time (optional)	Accuracy
Inm=1600A	1 s, 3 s, 5 s, 7 s (not adjustable)	±15%
Inm=2000A~4000A	1 s, 3 s, 5 s (not adjustable)	0~1s
Inm=6300A	0.3 s~7.5 s (adjustable)	±15%

The under-voltage will not operate when the voltage returns to 85% Ue and higher,, within 1/2 delay time.

Note:

A self-priming under-voltage delay release may be provided for special orders

of NXA20~63. There is no external under-voltage delay controller, and the delay time

is 0.3s~7.5s, selectable and adjustable with an accuracy of $\pm 15\%$.

When the under-voltage release is not powered, the circuit breaker cannot be closed

either electrically or manually.

Characteristics of under-voltage release	
Rated control power supply voltage Ue(V)	Ac110. AC220/230/240. AC380/400/415
Operating voltage (V)	(0.35~0.7)Ue
Reliable closing voltage (V)	(0.85~1.1)Ue
Reliable not-closing voltage (V)	≤0.35Ue
Power consumption (Inm=1600A/Inm=2000A~6300A)	20VA/48VA (W)

Power loss and input and output resistance

Power loss is the power loss of each pole measured at In, 50/60Hz. The input/output resistance is the DC resistance value of each pole at the cold state.

Frame	Rated current (A)	Drawer type	Fixed type

Dimension of busbar

Bolt configuration

Type of bolt	Application	Fastening busbar
16: M10	Fastening busbar	(36~52)N·m
20~63: M12	Fastening busbar	(61~94)N·m
16~63: M3	Fastening secondary connector	(0.4~0.5)N.m

Hole size and installation twisting moment of busbar

Drilling Φ (mm)	Diameter of bolt	Fastening twisting moment		
16:Ф11	M10	(36~52)N·m		
20~63:Ф13	M12	(61~94)N·m		

Connection busbar specification reference under different temperature

Maximum permissible temperature of busbar: 100°C

The material of busbar is bare copper

Recommended installation

Note:

- a.When a copper bar selected by users is not matched with a wiring terminal of the circuit breaker, extended busbar is required to be designed to transfer, and is designed by the users of their own. The cross section of the extended busbar cannot be less than the requirement in the table above. The interval among the extended busbar is not less than the interval among wiring terminals of the circuit breaker.
- b.After the busbar recommended in the table above is installed, the electric clearance between adjacent phases of the circuit breaker is not less than 18mm.
- c.Electrical elements are used for three-phase rectification and high-frequency inversion, such as a high-frequency induction heating furnace (medium-frequency furnace steelmaking equipment), a solid high-frequency welding machine (such as an embedded arc electric welding machine), vacuum heating smelting equipment (such as a monocrystalline silicon growth furnace), in load equipment by controlled silicon. When a circuit breaker is selected, the influence on the circuit breaker by higher order harmonic component generated by controlled silicon is required to be considered besides the influences by the environment temperature and altitude height. At the same time, capacity derating is required, and the capacity coefficient (0.5-0.8) is recommended.

d.The electric clearance of fastening bolts of upper and lower busbar needs to be not less than 20mm after the installation of the busbar by users. e.After the installation of the circuit breaker, the safety clearance among electrified bodies with different electric potential and between the electrified bodies and the ground are not less than 18mm.

Note

External transformer (Neutral CT) (3P+N mode)

The installation overall dimension of an external N-phase transformer is as below when the controller is of 3P+N type. The transformer is provided by the manufacturer. A connection copper bar and an installation support are manufactured by users.

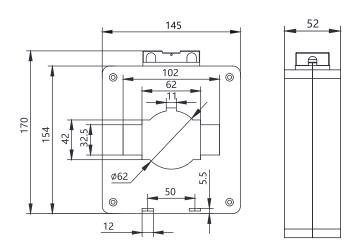

1-Wiring panel 2-Busbar 3-Fixation panel 4-Transformer

P/H type control unit

Chassis position indicator device

Wiring diagram

Operation requirements:

- 1. The chassis indication device can indicate the positions including "disconnected", "test" and "connected" which are completely or partially used according to the requirements of order.
- 2.When the body of the draw-out type circuit breaker is pushed from the "disconnected" position to the "test" position, 55# and 56# terminals should be transferred from connection into disconnection, and 56# and 57# terminals should be transferred from disconnection to connection.
- 3.When the body of the draw-out type circuit breaker is pushed from the "disconnected" position to the "test" position, 58# and 59# terminals should be transferred from connection into disconnection, and 59# and 60# terminals should be transferred from disconnection to connection. There is sufficient safety distance between the bus of the circuit breaker body and a bridge-type contact of the safety shutter, and tripping and switching operation can be carried out reliably.
- 4.When the body of the draw-out type circuit breaker is switched from the "test" position to the "connected" position, NXA16 type secondary circuit has no clearance. The NXA20-63 type safety shutter swing continuously after sending out the "cracking" sound, and the safety shutter jiggle handle rotates within 1.5 circles. 61# and 62# terminals are being transferred from connection to disconnection. 62# and 63# terminals are transferred from disconnection. The busbar of circuit breaker body is required to be reliably inserted into the bridge-type contact of the chassis base, and reliably bear the main circuit current to operate.
- 5.When the body of the draw-out type circuit breaker is pushed from the "connected" position to the "test" position, 58# and 59# terminals should be transferred from connection into disconnection, and 59# and 60# terminals should be transferred from disconnection to connection. There is sufficient safety distance between the busbar of the circuit breaker body and a bridge-type contact of the chassis, and tripping and switching operation can be carried out reliably.
- 6.When the body of the draw-out type circuit breaker swings from the "test" position to the "disconnected" position, 55# and 56# terminals should be transferred from connection to disconnection, and at the same time, the circuit breaker body still cannot be drawn out, and needs to swing toward the "disconnected" position until the handle cannot swing any more, and meanwhile, the circuit breaker body can be drawn out. After the circuit breaker is pulled out, 55# and 56# terminals should be transferred from disconnection to connection, and 56# and 57# terminals should be transferred from disconnection to connection, and 56# and 57# terminals should be transferred from disconnection to connection, and 56# and 57# terminals should be transferred from disconnection.
- 7.In the position transfer operation process of the chassis, the operation can only be stopped when the indicator points to "disconnected", "test" and "connected" or the position indicator cannot display the position of the circuit breaker body in the chassis correctly.
- 8. The above terminal numbers are all position signal specific numbers (55#-63#), which are not compatible with secondary circuit terminal numbers.

Earth protection

There are two protected modes for metal single-phase earth fault, namely vector sum(T) and earth current(W).Type-T detects zero sequence current and four-phase current vector(three-phase four-wire system) or three-phase current vector(three-phase three-wire system) will be added to provide reference for earth protection. Type-W detects earthing cable current directly by special external transformer. Type-W can protect both stages of breaker at the same time. Distance between the transformer and breaker should be no more than 5m. Zone interlocking can be used in the condition of vector sum earth fault.

a.correlation setting parameters of earth protection

Parameter Names	Setting range	Setting step size	Remarks
Set value of action current Ig	OFF+(0.2~1.0)×In (Frame NXA16/NXA20, Max= 1200A)		
Set value of action current ig	OFF+(500A~1200A) (Frame NXA32/NXA40/NXA63)	1A	
delay time Tg	(0.1~0.4)S	0.1s	
Zone interlocking of earth fault (for T-type earth fault) (ZSI)	1.At least one way of DO should be set as "Zone Interlocking" or "earth Interlocking" 2.At least one way of DI should be set as "Zone Interlocking" or "earth Interlocking"		Signal unit options must be S2 or S3 When DI/DO is set as zone interlocking , it effects "Earth Zone Interlocking" and "Short Zone Interlocking" When DI/DO is set as earth interlocking, it only effects "earth Zone Interlocking". If the function isn't set, it has no effect.

b. Operating characteristic of earth protection

Characteristic	l/lg	Tripping time	Permissible error
Non-operating characteristic	< 0.9	Non-operate	
Operation characteristic	> 1.1	Operate	
Time-delay operation	≥1.1	Note	$\pm 15\%$ or inherent absolute error $\pm 40ms$ (choose the max value)

Note: The delay time of earth fault is divided into two stages, inverse time and definite time. When fault current is less than 1.0In or 1200A, the protection is inverse, the time delay is calculated as follow:

t=(1.0In or1200A/I)2×Tg

In this equation: t---action time

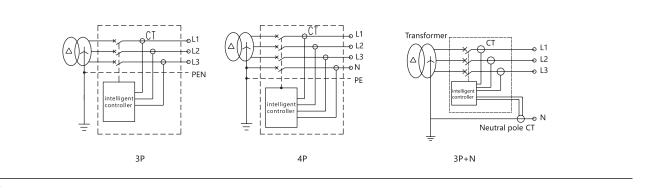

Tg --- setting delay time

I---fault earth current

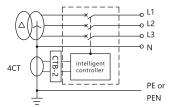

(P-059) Air Circuit Breaker | Annex III : Earth fault protection

When fault current is more than 1.0In or 1200A, the protection is definite; the time delay is the setting delay time. c. Schematic Diagram of detection

Туре-Т

Type-W

4CT:external special transformer CTB-2:earth current transformer module

Leakage protection (E)

Leakage protection applies to leakage fault caused by insulation failure of equipment or human touching exposed electric conduction position. Leakage tripping current I?n is independent of breaker rated current. An extra rectangular transformer is needed for zero sequence sampling method. This method is appropriate for small current protection because of its high accuracy and sensitivity. a. correlation setting parameters of leakage protection

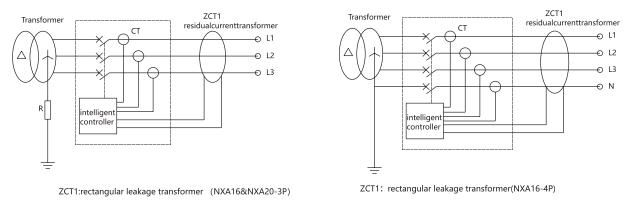

Leakage protection action characteristics

Characteristics	Current multiple (l/l △N)	Appointed trip time	Delay tolerance
Non-action characteristics	< 0.8	Non-action	
Action characteristics	> 1.0	Action	
Action characteristics	≥ 1.0	See the table below	±10% (inherent absolute tolerance± 40ms

Leakage	protection	action	delay
---------	------------	--------	-------

Maximum disconnection time (s) Fault current	0.06	0.08	0.17	0.25	0.33	0.42	0.5	0.58	0.67	0.75	0.83	Instantaneous

10I∆n	0.072	0.1	0.2	0.5	0.4	0.5	0.0	0.7	0.0	0.9	1	0.04

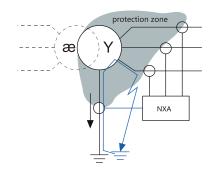

c. Schematic Diagram of leakage protection

Note: For Frame nxa16(3P&4P) and NXA20(3P) products, busbar can go through ZCT1, however, not for Frame NXA20 4P and FrameNXA32/NXA40/NXA63.

Dual earth fault protection

NXA P/H type controller has a unique feature: the installation of two independent earth fault protection curves is permissible, so that two kinds of configurations can be managed at the same time. The release can differentiate unlimited regional earth faults because of the feature to command the NXA circuit breaker to trip and the limited regional earth fault to command the medium-voltage circuit breaker to strip.
